Tire Science and Technology
Index to Volume 29
2001

Number	Months	Pages
1	Jan.–Mar.	1–64
2	Apr.–Jun.	65–133
3	Jul.–Sep.	134–197
4	Oct.–Dec.	198–268

A

Analytical tire model
An Analytical Transient Tire Model, April–June, 108

B

Belt edge
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91

C

Chow, C. L., Tai, W. H., and Liu, C. T.: Prediction of Mixed-mode Fracture in Particulate Composite Using a Damage Criterion, April–June, 79
Christenson stress
Application of the Finite Element Method in Screening of Body Turn up Heights for Radial Truck Tires, July–September, 186
Composite
Prediction of Mixed-mode Fracture in Particulate Composite Using a Damage Criterion, April–June, 79
Contact pressure
Analysis of Contact Stresses on the Tread Rubber Blocks with Slip, October–December, 216
Crack growth
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
Creep
Prediction of Tire Shape Change During Post Cure Inflation, October–December, 198

D

Damping
Dynamic Damping and Stiffness Characteristics of the Rolling Tire, October–December, 258
Dynamic behavior of tires
An Analytical Transient Tire Model, April–June, 108
Dynamic stiffness
Dynamic Damping and Stiffness Characteristics of the Rolling Tire, October–December, 258

E

Endurance
Application of the Finite Element Method in Screening of Body

Turn up Heights for Radial Truck Tires, July–September, 186
Energy density
Multiaxial Fatigue Crack Initiation in Rubber, July–September, 171
Energy release rate
Multiaxial Fatigue Crack Initiation in Rubber, July–September, 171
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
Explicit FEM
Optimization for Motorcycle Tire Using Explicit FEM, October–December, 230 F
Fatigue
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
Fatigue crack growth
A Test to Evaluate Fatigue Crack Growth in Rubber Compounds under Mixed Mode Loading, January–March, 44
Fatigue crack initiation
Multiaxial Fatigue Crack Initiation in Rubber, July–September, 171
FEA
Effects of Variations in Geometry and Material on the Non-uniformity of Tires, January–March, 56
Finite element analysis
Application of the Lateral Stress Theory for Groove Wander Prediction Using Finite Element Analysis, October–December, 244
Prediction of Tire Shape Change During Post Cure Inflation, October–December, 198
Finite element model (FEM)
Application of the Finite Element Method in Screening of Body Turn up Heights for Radial Truck Tires, July–September, 186
Inverse Design Methodology of a Tire, July–September, 155
Multiaxial Fatigue Crack Initiation in Rubber, July–September, 171
A New Computational Procedure to Predict Transient Hydroplaning Performance of a Tire, January–March, 2
Tread Depth Effects on Tire Rolling Resistance, July–September, 134
Fleischman, T. S., Kerchman, V., and Ebbott, T. G.: Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
Fracture
Prediction of Mixed-mode Fracture in Particulate Composite Using a Damage Criterion, April–June, 79
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
FVM
A New Computational Procedure to Predict Transient Hydroplaning Performance of a Tire, January–March, 2

G

Ghazi Zadeh, A., and Fahim, A.: An Analytical Transient Tire Model, April–June, 108
Giuliani, G. P., Medri, G., and Pirondi, A.: A Test to Evaluate Fatigue Crack Growth in Rubber Compounds under Mixed Mode Loading, January–March, 44
Groove wander
Application of the Lateral Stress

Theory for Groove Wander Prediction Using Finite Element Analysis, October–December, 244

H

Hydroplaning
A New Computational Procedure to Predict Transient Hydroplaning Performance of a Tire, January–March, 2
Hyperelastic material
Prediction of Mixed-mode Fracture in Particulate Composite Using a Damage Criterion, April–June, 79

I

Inverse problem
Inverse Design Methodology of a Tire, July–September, 155

J

Jianmin, G., Gall, R., and Zuomin, W.: Dynamic Damping and Stiffness Characteristics of the Rolling Tire, October–December, 258

K

Kennedy, R. H.: Prediction of Tire Shape Change During Post Cure Inflation, October–December, 198
Kim, D.-M., and Park, I.-J.: Analysis of Contact Stresses on the Tread Rubber Blocks with Slip, October–December, 216
Koide, M., Heguri, H., Kamegawa, T., Nakajima, Y., and Ogawa, H.: Optimization for Motorcycle Tire Using Explicit FEM, October–December, 230
Koishi, M., and Govindjee, S.: Inverse Design Methodology of a Tire, July–September, 155

L

Lateral stress theory
Application of the Lateral Stress Theory for Groove Wander Prediction Using Finite Element Analysis, October–December, 244
Luchini, J. R., Motil, M. M., and Mars, W. V.: Tread Depth Effects on Tire Rolling Resistance, July–September, 134

M

Mars, W. V.: Multiaxial Fatigue Crack Initiation in Rubber, July–September, 171
Material hysteresis
Tread Depth Effects on Tire Rolling Resistance, July–September, 134
Mixed mode loading
A Test to Evaluate Fatigue Crack Growth in Rubber Compounds under Mixed Mode Loading, January–March, 44
Motorcycle tire
Optimization for Motorcycle Tire

Using Explicit FEM, October–December, 230

N

Neural network
Optimization for Motorcycle Tire Using Explicit FEM, October–December, 230

O

Okano, T. and Koishi, M.: A New Computational Procedure to Predict Transient Hydroplaning Performance of a Tire, January–March, 2
Optimization
Optimization for Motorcycle Tire Using Explicit FEM, October–December, 230

P

Peters, J. M.: Application of the Lateral Stress Theory for Groove Wander Prediction Using Finite Element Analysis, October–December, 244
Pneumatic tire modeling
Tread Depth Effects on Tire Rolling Resistance, July–September, 134
Post cure inflation
Prediction of Tire Shape Change During Post Cure Inflation, October–December, 198

R

Radial force variation
Effects of Variations in Geometry and Material on the Non-uniformity of Tires, January–March, 56
Real
Dynamics of Tire, Wheel, and Suspension Assembly, April–June, 66
Ride
Application of the Lateral Stress Theory for Groove Wander Prediction Using Finite Element Analysis, October–December, 244
Rolling
Dynamic Damping and Stiffness Characteristics of the Rolling Tire, October–December, 258
Rubber
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
Rubber compounds
A Test to Evaluate Fatigue Crack Growth in Rubber Compounds under Mixed Mode Loading, January–March, 44

S

Second order tire model
An Analytical Transient Tire Model, April–June, 108
Shearing stress
Analysis of Contact Stresses on the Tread Rubber Blocks with Slip, October–December, 216
Slip
Analysis of Contact Stresses on the

Tread Rubber Blocks with Slip, October–December, 216
Slip-position
Analysis of Contact Stresses on the Tread Rubber Blocks with Slip, October–December, 216
Strain energy density
Application of the Finite Element Method in Screening of Body Turn up Heights for Radial Truck Tires, July–September, 186
Suspension
Dynamics of Tire, Wheel, and Suspension Assembly, April–June, 66, April–June, 66

T

Thermal analysis
Prediction of Tire Shape Change During Post Cure Inflation, October–December, 198
Thermoelasticity
Inverse Design Methodology of a Tire, July–September, 155
Tire analysis
Effects of Variations in Geometry and Material on the Non-uniformity of Tires, January–March, 56
Tire design
Inverse Design Methodology of a Tire, July–September, 155
Tire dynamic models
A Comparison of Two Sub-structuring Techniques for Representing the Modal Properties of Tires, January–March, 23
Tire head buildup
Tread Depth Effects on Tire Rolling Resistance, July–September, 134
Tire life prediction
Multiaxial Fatigue Crack Initiation in Rubber, July–September, 171
Tire models
An Analytical Transient Tire Model, April–June, 108
Tire noise and vibration
A Comparison of Two Sub-structuring Techniques for Representing the Modal Properties of Tires, January–March, 23
Tire performance
An Analytical Transient Tire Model, April–June, 108
Tire rolling loss
Tread Depth Effects on Tire Rolling Resistance, July–September, 134
Tire rolling resistance
Tread Depth Effects on Tire Rolling Resistance, July–September, 134
Tires
Application of the Finite Element Method in Screening of Body Turn up Heights for Radial Truck Tires, July–September, 186
Dynamic Damping and Stiffness Characteristics of the Rolling Tire, October–December, 258
Dynamics of Tire, Wheel, and Suspension Assembly, April–June, 66
A New Computational Procedure to Predict Transient Hydroplaning Performance of a Tire, January–March, 2
Prediction of Tire Shape Change During Post Cure Inflation, October–December, 198
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
Tire sub-structuring
A Comparison of Two Sub-structuring Techniques for Representing

the Modal Properties of Tires, January–March, 23
Tire testing
Tread Depth Effects on Tire Rolling Resistance, July–September, 134
Tire uniformity
Effects of Variations in Geometry and Material on the Non-uniformity of Tires, January–March, 56
Torsion
Torsional Crack Growth Test to Simulate Belt Edge Deformation, April–June, 91
Transient tire model
An Analytical Transient Tire Model, April–June, 108
Tread design
Application of the Lateral Stress Theory for Groove Wander Prediction Using Finite Element Analysis, October–December, 244
Tread pattern
A New Computational Procedure to Predict Transient Hydroplaning Performance of a Tire, January–March, 2
Tread rubber block
Analysis of Contact Stresses on the Tread Rubber Blocks with Slip, October–December, 216
Tsihlas, D., Lacroix, T., and Clayton, B.: A Comparison of Two Substructuring Techniques for Representing the Modal Properties of Tires, January–March, 23

Y

Yan, X.: Application of the Finite Element Method in Screening of Body Turn up Heights for Radial Truck Tires, July–September, 186
Yu, H. J., and Aboutorabi, H.: Dynamics of Tire, Wheel, and Suspension Assembly, April–June, 66
